

Chapter 4

Feasibility Analysis

Feasibility Analysis

Feasibility – the measure of how beneficial or practical an information system will be to an organization.

Feasibility analysis – the process by which feasibility is measured.

Creeping Commitment – an approach to feasibility that proposes that feasibility should be measured throughout the life cycle.

Feasibility Checkpoints

- Systems Analysis Scope Definition
- Systems Analysis Problem Analysis
- Systems Design Decision Analysis

Four Tests For Feasibility

Operational feasibility – a measure of how well a solution will work or be accepted in an organization.

Usability analysis – a test of the system's user interfaces.

Technical feasibility – a measure of the practicality of a technical solution and the availability of technical resources and expertise.

Schedule feasibility – a measure of how reasonable the project timetable is.

Economic feasibility - a measure of the costeffectiveness of a project or solution.

Cost-Benefit Analysis Techniques

Costs:

- Development costs are one time costs that will not recur after the project has been completed.
- Operating costs are costs that tend to recur throughout the lifetime of the system. Such costs can be classified as:
 - Fixed costs occur at regular intervals but at relatively fixed rates.
 - Variable costs occur in proportion to some usage factor.

Benefits:

- Tangible benefits are those that can be easily quantified.
- Intangible benefits are those benefits believed to be difficult or impossible to quantify.

Costs for a Proposed Systems Solution

Estimated Costs for Client-Server System Alternative							
DE	VELOPMENT COSTS						
DE	VELOFMENT COSTS						
Pei	rsonnel:						
2	Systems Analysts (400 hours/ea \$50.00/hr)	\$40,00					
4	Programmer/Analysts (250 hours/ea \$35.00/hr)	\$35,00					
1	GUI Designer (200 hours/ea \$40.00/hr)	\$8,00					
1	Telecommunications Specialist (50 hours/ea \$50.00/hr)	\$2,50					
1	System Architect (100 hours/ea \$50.00/hr)	\$5,00					
1	Database Specialist (15 hours/ea \$45.00/hr)	\$67					
1	System Librarian (250 hours/ea \$15.00/hr)	\$3,75					
Exp	penses:						
4	Smalltalk training registration (\$3,500.00/student)	\$14,00					
1	w Hardware & Software: Development Server	\$18,70					
1	Server software (operating system, misc.)	\$1,50					
1	DBMS server software	\$7,50					
7	DBMS client software (\$950.00 per client)	\$6,65					
	Total Development Costs:	\$143,27					
	Jacondon's Sur Microphysical Spanish (Anna Spanish)						
PR	OJECTED ANNUAL OPERATING COSTS						
Pei	rsonnel:						
2	Programmer/Analysts (125 hours/ea \$35.00/hr)	\$8,75					
1	System Librarian (20 hours/ea \$15.00/hr)	\$30					
Exp	penses:						
1	Maintenance Agreement for server	\$99					
1	Maintenance Agreement for server DBMS software	\$52					
	Preprinted forms (15,000/year @ .22/form)	\$3,30					
	Total Projected Annual Costs:	\$13,87					

Three Popular Techniques to Assess Economic Feasibility

- Net Present Value
- Payback Analysis
- Return On Investment

The **Time Value of Money** is a concept that should be applied to each technique. The time value of money recognizes that a dollar today is worth more than a dollar one year from now.

Net Present Value (NPV) Analysis

Net Present Value (NPV) – an analysis technique that compares the annual discounted costs and benefits of alternative solutions.

Present Value Formula

Present Value – the current value of a dollar at any time in the future.

Discount rate (factor) – a percentage similar to interest rates that you earn on your savings.

In most cases the discount rate for a business is the opportunity cost of being able to invest money in other projects or investments

Cost and Benefits Formulas

Present Value (n) =
$$\frac{1}{(1 + Discount \, Rate)^n}$$
 where n is the number of years

 $Present\ Value\ Cost\ (n) = (Development\ Cost + Operation\ Cost) * PresentValue(n)$

$$Cumulative\ Cost\ (n) = \sum_{i=0}^{n} Present\ Value\ Cost(i)$$

 $Present\ Value\ Benefit\ (n) = Annual\ Benefit\ *Present\ Value\ (n)$

Cumulative Benefits
$$(n) = \sum_{i=0}^{n} Present Value Benefits(i)$$

 $Cumulative\ Lifetime\ Adjusted\ (n) = Cumulative\ Cost\ (n) + Cumulative\ Benefits\ (n)$

Example

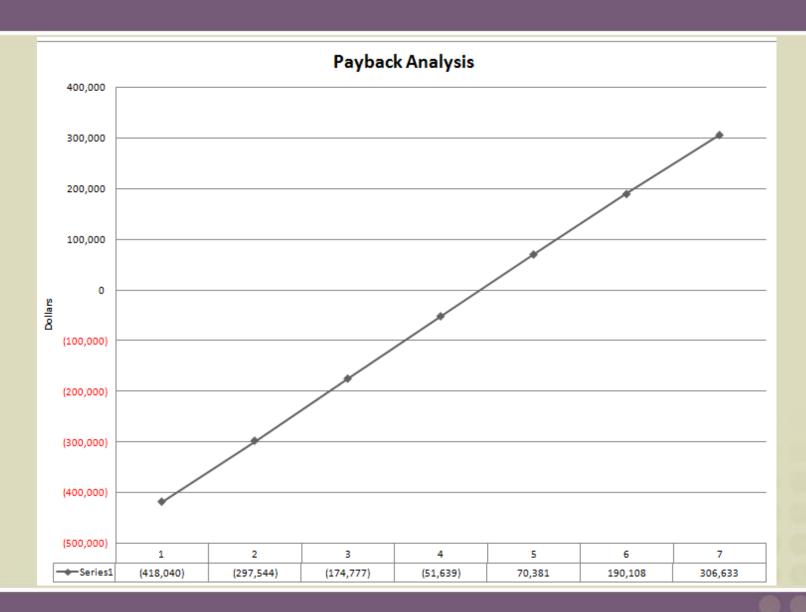

А	В	С	D	Е	F	G	Н	
	Year							
Cash Flow Description	0	1	2	3	4	5	6	
Development Cost (\$):	(418,040)	0	0	0	0	0	0	
Operation & Maintenance Cost (\$):	0	(15,045)	(16,000)	(17,000)	(18,000)	(19,000)	(20,000)	
Discount Factor of 12%	1.000	0.893	0.797	0.712	0.636	0.567	0.507	
Present Value Adjusted Cost (\$):	(418,040)	(13,433)	(12,755)	(12,100)	(11,439)	(10,781)	(10,133)	
Cumulative Value Cost (\$):	(418,040)	(431,473)	(444,228)	(456,328)	(467,768)	(478,549)	(488,681)	
Benefits Derived from Operation (\$):	0	150,000	170,000	190,000	210,000	230,000	250,000	
Present Value Adjusted Benefits (\$):	0	133,929	135,523	135,238	133,459	130,508	126,658	
Cumulative Value Benefits (\$):	0	133,929	269,452	404,690	538,149	668,657	795,315	
Cumulative (Cost + Benefits) (\$):	(418,040)	(297,544)	(174,777)	(51,639)	70,381	190,108	306,633	
	Cash Flow Description Development Cost (\$): Operation & Maintenance Cost (\$): Discount Factor of 12% Present Value Adjusted Cost (\$): Cumulative Value Cost (\$): Benefits Derived from Operation (\$): Present Value Adjusted Benefits (\$): Cumulative Value Benefits (\$):	Cash Flow Description Development Cost (\$): (418,040) Operation & Maintenance Cost (\$): 0 Discount Factor of 12% 1.000 Present Value Adjusted Cost (\$): (418,040) Cumulative Value Cost (\$): (418,040) Benefits Derived from Operation (\$): 0 Present Value Adjusted Benefits (\$): 0 Cumulative Value Benefits (\$): 0	Cash Flow Description Development Cost (\$): (418,040) Operation & Maintenance Cost (\$): Discount Factor of 12% Present Value Adjusted Cost (\$): (418,040) Cumulative Value Cost (\$): (418,040) Benefits Derived from Operation (\$): O 150,000 Present Value Adjusted Benefits (\$): O 133,929 Cumulative Value Benefits (\$): O 133,929	Cash Flow Description 0 1 2 Development Cost (\$): (418,040) 0 0 Operation & Maintenance Cost (\$): 0 (15,045) (16,000) Discount Factor of 12% 1.000 0.893 0.797 Present Value Adjusted Cost (\$): (418,040) (13,433) (12,755) Cumulative Value Cost (\$): (418,040) (431,473) (444,228) Benefits Derived from Operation (\$): 0 150,000 170,000 Present Value Adjusted Benefits (\$): 0 133,929 135,523 Cumulative Value Benefits (\$): 0 133,929 269,452	Cash Flow Description 0 1 2 3 Development Cost (\$): (418,040) 0 0 0 Operation & Maintenance Cost (\$): 0 (15,045) (16,000) (17,000) Discount Factor of 12% 1.000 0.893 0.797 0.712 Present Value Adjusted Cost (\$): (418,040) (13,433) (12,755) (12,100) Cumulative Value Cost (\$): (418,040) (431,473) (444,228) (456,328) Benefits Derived from Operation (\$): 0 150,000 170,000 190,000 Present Value Adjusted Benefits (\$): 0 133,929 135,523 135,238 Cumulative Value Benefits (\$): 0 133,929 269,452 404,690	Cash Flow Description 0 1 2 3 4 Development Cost (\$): (418,040) 0 0 0 0 Operation & Maintenance Cost (\$): 0 (15,045) (16,000) (17,000) (18,000) Discount Factor of 12% 1.000 0.893 0.797 0.712 0.636 Present Value Adjusted Cost (\$): (418,040) (13,433) (12,755) (12,100) (11,439) Cumulative Value Cost (\$): (418,040) (431,473) (444,228) (456,328) (467,768) Benefits Derived from Operation (\$): 0 150,000 170,000 190,000 210,000 Present Value Adjusted Benefits (\$): 0 133,929 135,523 135,238 133,459 Cumulative Value Benefits (\$): 0 133,929 269,452 404,690 538,149	Cash Flow Description 0 1 2 3 4 5 Development Cost (\$): (418,040) 0 <td< th=""></td<>	

Payback Analysis

Payback analysis – a technique for determining if and when an investment will pay for itself.

Payback period – the period of time that will lapse before accrued benefits overtake accrued and continuing costs.

Payback Analysis for a Project

Return-on-Investment Analysis (ROI)

Return-on-Investment (ROA) analysis – a technique that compares the lifetime profitability of alternative solutions.

The ROI for a solution or project is a percentage rate that measures the relationship between the amount the business gets back from an investment and the amount invested.

Lifetime ROI = (estimated lifetime benefits – estimated lifetime costs) / estimated lifetime costs

Annual ROI = lifetime ROI / lifetime of the system
